PROFESSIONAL SUMMARY

Security+ certified SOC Analyst with hands-on experience in alert triage, SIEM monitoring, correlation-rule tuning, EDR telemetry integration, vulnerability assessment, and threat detection across Splunk, Wazuh, and Microsoft Sentinel. Builds detections mapped to MITRE ATT&CK and validates alert generation through controlled adversary simulations. Experienced in continuous security monitoring, log analysis, incident investigation, and escalation. Seeking a Tier 1 SOC Analyst role supporting security monitoring, detection, investigation, and response.

TECHNICAL SKILLS

SIEM & Detection: Splunk · Wazuh · Microsoft Sentinel · Alert Tuning · Log Analysis · Incident Triage · Event Correlation · EDR Telemetry Integration

Threat Intelligence & OSINT: MITRE ATT&CK · Threat Actor Research · OSINT Research · DNS Reconnaissance (dig, nslookup) · Threat Reporting

Security Testing & Assessment: Nessus · Nmap · Metasploit · WPScan · Wireshark · CVSS Risk Prioritization · Vulnerability Assessment

Systems & Scripting: Windows Server · Linux (Ubuntu) · Kali Linux (Lab Environment) · PowerShell · Bash · Python (Basic)

Frameworks & Compliance: NIST CSF · Risk Management Framework (RMF)

CERTIFICATIONS

CompTIA Security+ (SY0-701) | Mar 2026

Cybersecurity Professional Certificate — TripleTen | Mar 2026

Google Cybersecurity Certificate | Oct 2023

FEMA Emergency Management Certifications | Dec 2023

Transportation Safety Certificate — U.S. DOT | Mar 2020

CISSP — In Preparation

PROFESSIONAL EXPERIENCE

Applied Cybersecurity Training

Cybersecurity Analyst Trainee | TripleTen Cybersecurity Professional Program (Supernova MGU Externship)

Remote | Jul 2025 – Mar 2026

- Monitored and analyzed security events across Splunk, Wazuh, and Microsoft Sentinel to identify suspicious activity, anomalies, and potential threats.
- Reduced false-positive escalations by approximately **30%** through SIEM alert tuning, correlation-rule optimization, and analysis of recurring benign activity.
- Integrated Windows Defender Operational logs into Wazuh SIEM and developed detection use cases mapped to MITRE ATT&CK techniques **T1218.010**, **T1003**, and **T1053.005**.
- Diagnosed SIEM log-ingestion failures and restored data collection by troubleshooting pipeline issues and applying least-privilege service-account configurations.
- Conducted vulnerability assessments using **Nessus and Nmap**, identifying **25+ vulnerabilities** and prioritizing findings using CVSS-based risk analysis.

- Developed risk-based remediation recommendations and tracked vulnerability findings during the Supernova MGU cybersecurity assessment.
- Conducted threat intelligence and OSINT research, including DNS reconnaissance, threat-actor research, and MITRE ATT&CK mapping to support security assessments.
- Performed controlled adversary simulations involving credential dumping, scheduled-task persistence, LOLBin abuse, and PowerShell activity to validate SIEM detection coverage.
- Conducted controlled web-application security testing using WPScan and Metasploit in a Kali Linux laboratory environment.

Professional Experience

Transportation Operator | Transdev, BWI Airport

Laurel, MD | Feb 2020 – Present

- Conduct continuous surveillance and security monitoring across a high-traffic transportation facility serving thousands of daily passengers.
- Identify suspicious activity, operational risks, and potential security threats and escalate incidents according to established security procedures.
- Investigate security incidents, document findings, and coordinate with security personnel and emergency-response teams during security-related events.
- Maintain accurate incident records and documentation in accordance with established transportation security requirements.
- Support continuous situational awareness and incident-response activities in a regulated transportation security environment.

KEY PROJECTS

SOC Monitoring & Threat Detection Lab

Integrated Windows Defender Operational logs into Wazuh SIEM to improve endpoint visibility. Developed detection use cases mapped to MITRE ATT&CK techniques **T1218.010 (Regsvr32)**, **T1003 (OS Credential Dumping)**, and **T1053.005 (Scheduled Task/Job: Scheduled Task)**. Conducted controlled PowerShell adversary simulations and validated successful alert generation.

Enterprise Vulnerability Assessment

Conducted vulnerability scans using **Nessus and Nmap**, identifying and prioritizing **25+ vulnerabilities** across enterprise laboratory environments. Applied CVSS-based risk scoring and developed remediation-focused recommendations.

Threat Intelligence & OSINT Project

Conducted OSINT reconnaissance, including DNS lookups, WHOIS research, and traceroute analysis, during the Supernova MGU cybersecurity assessment. Researched threat-actor tactics, techniques, and procedures and mapped findings to MITRE ATT&CK.

Penetration Testing Lab Exercise

Performed controlled web-application security testing using **WPScan and Metasploit** in a Kali Linux laboratory environment. Validated identified weaknesses through controlled proof-of-concept exploitation and documented security findings.

EDUCATION

M.S. Leadership in Homeland Security & Emergency Management

Grand Canyon University | Jul 2024 | GPA: 3.68

B.A. Christian Studies

Grand Canyon University | Mar 2023 | GPA: 3.6

Ph.D. in Psychology

California Pacificatory University | Nov 2025
